METALWORKING CHEMICALS

Mission Statement:

TriboChem Industries is committed to developing and applying its chemistry to deliver economies, efficiencies and environmental benefits to its customers and their processes. It will achieve this through a constant investment in its own people and technologies. In parallel with this commitment is an unrelenting drive towards service and excellence in all our activities.

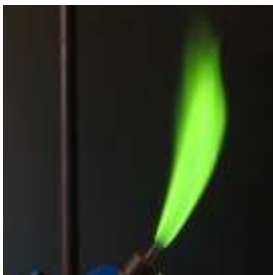

TriboChem Industries:

TriboChem Industries produces, and markets, a wide range of performance additives for the engineering industry. Our commitment to the research and Development of process supplements has led to continual investment in both internal infrastructure and highly experienced personnel. Both afford us the ability to develop, and provide, bespoke industry specific solutions. Our Head Office based in Gurgaon, India, comprises a modern laboratory complex as well as extensive warehouse and production facilities. Supplementing these, we have manufacturing resources enabling rapid response to customer requirements.

Technical Service:

TriboChem Industries aims to assist and inform our chosen markets of operation of: our company, our products and our unrivaled technical service. This unique approach to customer service ensures we have a dedicated team of technical service personnel whose experience spans a range of industrial sectors enabling them to advise on the efficient and economic use of our products best suited to the customers application.

Principal Products:

The product ranges mentioned within this brochure are used as primary Metal working industrial chemicals within the global metal working manufacturing market. We provide comprehensive technical data sheets on all of our individual products which are available on request.

Cleaning Medium (De-greasing / de-oiling solutions.)

MetClean MMC 400	Low foaming and suited for cleaning ferrous components in pressure spray and ultrasonic cleaning systems and provides temporary rust protection on the cleaned components.
MetClean MMC 80	A multi metal compatible cleaner for the pressure and ultrasonic cleaning systems. It provides temporary rust protection for the cleaned components. It is compatible with hard water.
MetClean P 52	Heavy duty cleaning powder which is ideally suited for the removal of oil on quenched components.

Metal working lubricants

Trisol AL 90	Synthetic metal working lubricant for the general purpose machining and grinding applications. It provides excellent sump life with efficient bacterial and rust control.
Trisol 40	Blue coloured emulsion type metal working lubricant for the malleable materials like aluminum as well as for ferrous components and provides excellent tool life.
Trisol 44	Emulsion type metal working lubricant for the malleable materials like aluminum and provides excellent tool life.
Trisol S3	Semi-synthetic metal working lubricant which is ideally suited for grinding application and provides excellent rust control.
Trisol EP	Water dilutable metal working fluid for the heavy-duty machining applications like broaching etc., gives excellent tool life compared to neat cutting fluids and lesser heat generation on work-piece, resulting in more productivity, economy and better working environment.

VCI Products

TriboChem Industries provides various varieties of VCI products, which is suitable according to the customer requirements.

Press working Lubricants

Metform 123	Water dilutable light duty operations.
SynForm EP	Water as well as oil dilutable paste for shallow and deep drawing applications.
Drawsol 84	Water dilutable heavy duty operations.

Rust Removers

MetDerust 840	A three in one solution consists of de-oiling, de-rusting and iron phosphating properties, and above all, it is safe to handle than conventional rust removers.
MetDerust 880	A rust remover with built in passivators to protect the treated metal surface from corrosion.

Rust preventives (water base)

FerroGuard WT 87	Medium term rust preventive oil .
FerroGuard WT 17	For leakage testing.

Rust preventives (oil base)

FerroGuard 2529	Hard water compatible rust preventive solution which can be used in 1:20-40 dilutions. It is ideally suited for leakage testing application.
FerroGuard WRX 90	For leakage testing and short term protection on open indoor storage.

Forging Lubricant

TriForm Wt1	Water dilutable graphite base lubricant.
